Hardtopix Custom GFRC Fireplace Surrounds

* Color palette may not accurately display physical concrete sample

Twilight Gray
Tone: Medium Neutral

Hardtopix Color Collection: 2025

Bear Creek
Tone: Muted Taupe

Hardtopix Color Collection: 2025

Dusk
Tone: Deep Taupe

Hardtopix Color Collection: 2025

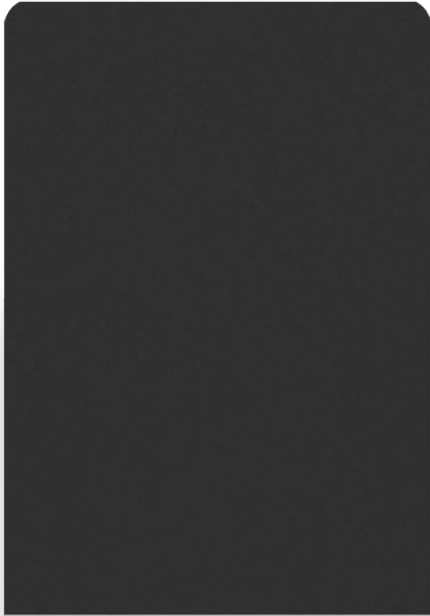

1% Coal
Tone: Deep Cool

Hardtopix Color Collection: 2025

Kendall Charcoal
Tone: Deep Slate

Hardtopix Color Collection: 2025

Midnight Black
Tone: Deep Graphite

Hardtopix Color Collection: 2025

The Signature Finish

Refined character. Architectural durability.

Real concrete shouldn't look like plastic. We hone our High-Strength finish to a smooth, matte surface that keeps the material's natural character. You get the raw look of stone with a refined feel that works perfectly for mantels, vanities, and architectural details. It's a surface designed to handle real life

01. The Look (Matte)

We use a premium water-based sealer that cures invisible. Unlike solvent enhancers that create an artificial "wet" look, our finish is strictly matte. It absorbs light rather than reflecting it, keeping focus on the concrete.

02. The Protection (Sealed)

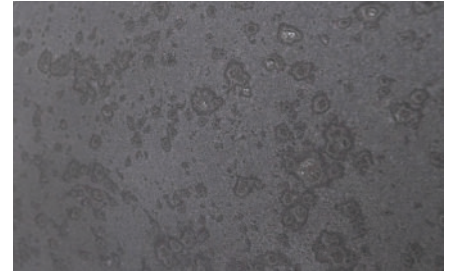

The surface looks raw, but it is fully armored. Our sealer bonds with the concrete to repel common contaminants like coffee, and oils. It creates a barrier that allows for easy cleaning with mild soap and water.

Technical Performance

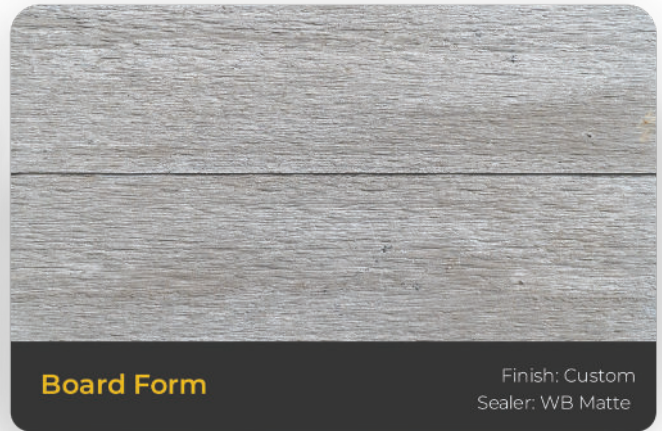

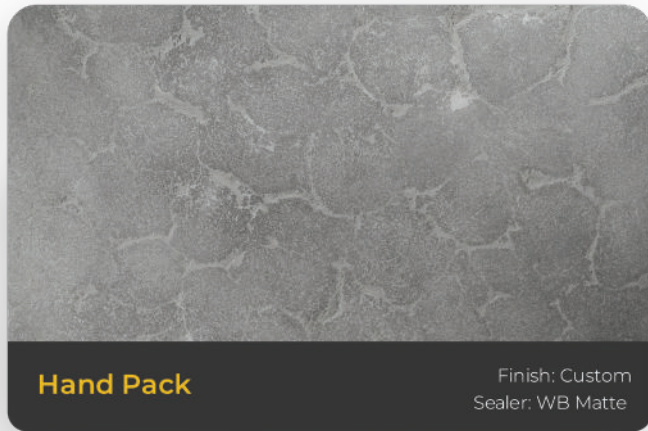

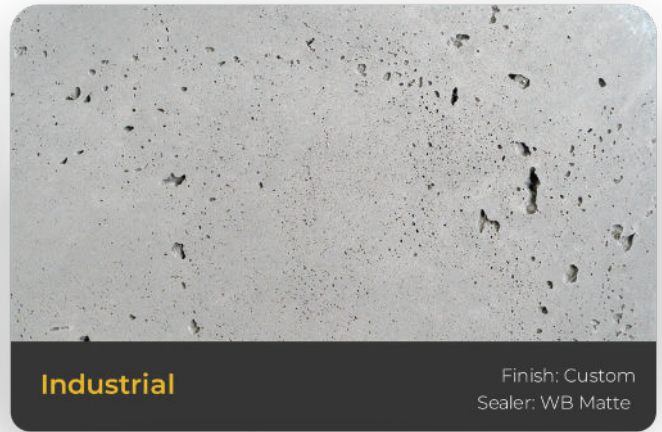

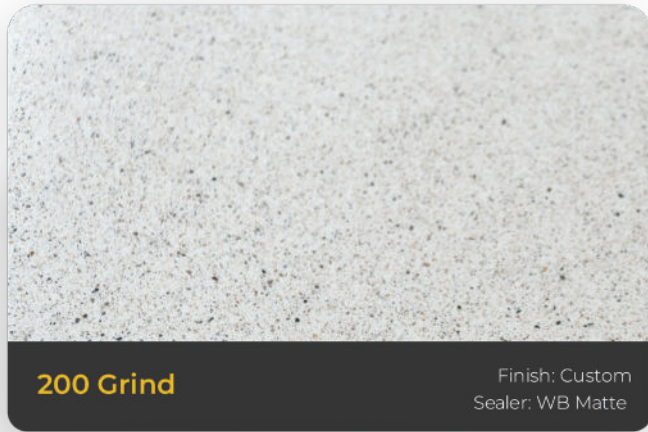

- Heat Resistance: Non-combustible and safe for direct contact with fireplace surrounds
- Stain Resistance: Sealed to resist common household products, oils, and foods.
- Maintenance: Clean with warm water and mild pH-neutral soap. Avoid abrasive scrubbers.

Understanding Visual Variation

Concrete is an earth material, distinct from engineered quartz or solid surface plastics. You should expect subtle tonal variations, microscopic pinholes, and faint flow lines that reflect the hand-casting process. We consider these unique “birthmarks” essential to the aesthetic—proof that your piece was crafted, not manufactured.

Our Custom Concrete Finishes

Explore Concrete:

Shape it. Refine it. Let it show its natural character. The subtle flaws, texture, and color shifts are what make concrete real—built, not manufactured.

Sample Information:

Samples provide a close representation of color, texture, and finish. Expect slight differences in tone, surface movement, and air voids. These natural traits define the authenticity of handcrafted concrete.

Sample Boxes are Available!

EDUCATING
CONSULTING
SALES
SUPPORT

All samples are produced in a controlled environment. Concrete pigments and aggregates are natural materials, so variation in tone, texture, and aggregate distribution will occur. These changes are part of concrete's character, not imperfections.

Designers and clients should expect natural surface details such as small pinholes or air pockets formed during casting. These marks of craftsmanship are inherent to the process and reflect the authenticity of precast concrete.
